Instructions for Using Server and Repository

- Download SVN on your computer (Any program that works for your computer)
    - https://subversion.apache.org/packages.html
    - **RECOMMENDED:** Use VS code or something similar.
        - If using VS code, install SVN extension by Christ Johnston
        - If something else, install something similar

- Be able to look at basic SVN commands and definitions
  https://web.archive.org/web/20110316170621/http://www.duchnik.com/tutorials/vc/svn-command-reference
- Use http://cisc.vensandrot.com:1080/svn/ciscproject to access the online server (Should work in other countries and with a variety of internet providers)
- Each group will have a different username and password
    - Contact QA for the password, The usernames are provided below
-
- Please have read the section in the textbook about how making changes to a repository works with more than one user.

- Use Command/CTRL Shift P or open command palette
- Then type SVN: checkout
- Repo URL: http://cisc.vensandrot.com:1080/svn/ciscproject/ (You will be able to copy the whole repository)
- You can access the repository of choice (your own) by adding your group name to the end, like such http://cisc.vensandrot.com:1080/svn/ciscproject/backbone
- You will be asked to select the folder to store everything

(Bless Vensan for making the server and being a brave and patient soul)

You can select and commit changes, you should be all set. Any dire questions, please come to ask QA.
